

Grovelands Care Home - 60 Bed Care Home

Jones Building Group has completed the design and construction of a 60-bed care home for Somerset Care including dementia facilities, car parking, drainage, external works and mains facilities.

Project Objective

The design and construction of a 60-bed care home for Somerset Care on Grove Avenue in Yeovil. We are able to offer high quality technical services through strong, locally based teams and aim to make the construction process as smooth and stress-free as possible recognising that our clients deserve the best service we can provide.

Description and Approach

The redevelopment of a residential home to provide a 60-bed state of the art care home with dementia facilities, car parking, drainage, external works and mains facilities. The building works were completed over two phases. Phase one was the construction of the new care home. The existing home was fully operational during the construction works and therefore great consideration and respect was required from the construction team working on site. Upon completion of the new care home the residents moved into their new homes and the demolition of the existing care home then took place.

Completion & Handover

Grovelands Care Home was successfully completed and handed over in August 2007.
